## Professional Experience

### **Modify Ink** - Senior Software Architect (2017 - Present)

Pivoted a consumer facing application for product customization and ordering into a white label SAAS offering. Developed client facing API with authentication. Converted manual build and deployment process to a Docker based automated build, enabling elastic server clustering and load balancing, with administration and deployment via Rancher.

### **Experticity** - Senior Software Developer (2012-2017)

Moved the companies Flash based training platform into a Javascript based solution. Assisted in migrating from a legacy monolithic platform to a microservice architecture.

### **eReinsure** - User Interface Architect (2011 - 2012)

Did software development to improve workflows for a platform that helped individuals negotiate reinsurance policies and contracts.

### **iCentris** User Interface Architect (2005 - 2011)

Worked on the front-end code for a set of reporting tools for downline sales management.

### **Basic Research** - Software Developer (2005 - 2006)

Development of ecommerce systems utilizing advanced Javascript, XSLT, and PHP.

## Skills

Proficient with the following languages/frameworks:

- Javascript/Typescript, Node.js, React+Redux, Backbone, Angular, Docker, XML/XSLT, HTML, CSS, Git, SVN

Comfortable working with:

- Java/JSP, Spring, Ruby on Rails, SQL, RethinkDB, Rancher

Technology I've been exposed to or are experimenting with:

- Go, Kubernetes, Terraform, Swift, and many others

I'm capable with all major operating systems, but prefer macOS/Linux for development/deployment.
